SKILLS

PROGRAMMING LANGUAGES: JavaScript, React, Redux, Jest, HTML / CSS, SQL, SQLite, NodeJS, Express, Knex, Python, C, Jest Testing, Enzyme, React Native, LESS / SASS, MongoDB, Mongoose

EXPERIENCE

Lambda Studios · Software Engineer
Sept. 2019 to Feb. 2020 · Remote
- Created fast and easy to read React code that interacted with various component libraries as well as our own Node.js + Express application
- Conducted peer code reviews to ensure there was no bugs being made as well as helping each other learn in a constructive environment
- Coordinated design implementations by hosting a demo of the designs on Figma which lead to a professional look throughout the website
- Provided a positive attitude to the rest of the team on Zoom meetings which helped us bond and lead to a fun, clean development experience
- Developed RESTful APIs with NodeJS and MongoDB, leading to fast and efficient service building

Freelance · Web Developer
Mar. 2019 to Sept. 2019 · Remote
- Emphasized responsive design to allow clients and their viewers to enjoy the web experience on any device
- Utilized React's component lifecycle methods in order to alter the results given back on the client-side which enhanced the user's experience throughout
- Studied basic web design with Figma to create more elegant projects for my clients
- Practiced better communication to clients by giving clear deadlines and addressing issues immediately, resulting in a better experience for the client

Visual Communications · Intern
Oct. 2017 to June 2018 · Los Angeles, California
- Increased exposure to film festivals by reaching out to communities through efficiently advertising and through physical communication.
- Coordinated 2 volunteer teams of 4 people in the setup process of various venues, leading to a visually stunning experience for customers.
- Enhanced company's film festival website by updating and adding 10+ article review posts to the Wordpress website
- Increased profit from film festivals by 5%, creating visually appealing pins by collaborating with the logo designers about the specifications of the logos the company needed
- Taught other interns how to create the products needed at film festivals by writing clear and concise documentation outlining each step

PROJECTS

Task Master · Apr. 2020 to Current
- Created data models using Mongoose to utilize MongoDB inside a Node.js environment
- Learned how to create sitemaps and web design patterns utilizing Figma to create easy-to-read designs
- Refined back-end routes and file structure which lead to less bugs and clarity for other developers that scan through the code
- Tested API routes extensively with Postman in order to ensure no bugs occur during calls to the core functionality of the API
- Managed tasks on Trello to simulate a solo agile environment, keeping code on track as well as tracking progress

Let's Get Tacos · Feb. 2019 to Mar. 2019
- Researched and convinced all team members that Material-UI should be used to style the application after independently creating a demo showcasing the framework
- Assisted fellow team member in learning how to use Redux, propelling him to be more confident in making changes on the front-end
- Took lead on design decisions to get our team up and running with a prototype for our client to test out
- Learned PostgreSQL to be able to aid our backend engineer with database migrations as well as minute changes throughout the server

EDUCATION

Lambda School, Certificate in Web Development and Computer Science · July 2018 to Mar. 2019
- Learned and implemented Git branching workflow for large projects
- Utilized an Agile development workflow during capstone project
- Created production-ready code using skills in: React, Redux, Node, and Express to create multi-paged applications
